

Anas Alhatti

Software Engineer

Turkey, Istanbul | Phone: +90 554 143 30 96 | anasalhati@gmail.com

SUMMARY

Software Engineer with strong hands-on experience in Android development, full-stack web applications, and autonomous AI agent workflows. Proficient in building robust, real-world platforms utilizing Kotlin, React, and Python, with a deep technical focus on implementing Large Language Models (LLMs), advanced RAG integrations, and visual DAG orchestration.

TECHNICAL SKILLS

- **Android:** Kotlin, Jetpack Compose, MVVM, Clean Architecture, Room, Firebase
- **AI & Data:** Large Language Models (LLMs), RAG, Langflow, LangChain, PySpark, Scikit-learn
- **Web & Backend:** Next.js 14, React, FastAPI (Python), Spring Boot (Java), REST APIs
- **Tools & Cloud:** Git, AWS EC2, Android Studio, IntelliJ IDEA, MySQL

PROJECTS

- **FinanceApp — Android (Kotlin, Jetpack Compose)**
 - Built a personal finance app using Clean Architecture and MVVM to track income, manage budgets, and provide visual progress tracking.
 - Multi-currency support (TRY, USD, EUR, AED) and CSV import/export
 - Visual reports and charts for financial insights
- **Smart Hospital Appointment System — Web**
 - React, JavaScript, Thymeleaf, Spring Boot, Java, MySQL, AWS EC2
 - Full-stack hospital management system featuring a JavaScript frontend and secure server-side Thymeleaf authentication for role-based access.
 - Patients book appointments and view history, diagnosis, and prescriptions
 - Doctors manage appointments and write prescriptions integrated with medicine API
 - Admin manages users, departments, and doctor assignments
- **Matte AI Agent — AI & Full-Stack**
 - Engineered a production-grade platform to build, manage, and deploy autonomous AI workflows securely, utilizing an asynchronous FastAPI and MySQL backend.
 - Integrated a fully embedded Langflow canvas to enable visual, drag-and-drop orchestration of agents, memory, and retrievers without hardcoding brittle logic.
 - Implemented advanced Retrieval-Augmented Generation (RAG) via vector-based document retrieval to establish reliable long-term memory and eliminate hallucinations.
 - Architected the infrastructure using AWS EC2, Docker Compose, and Nginx, with a responsive Next.js/Tailwind frontend featuring real-time API key injection.

EDUCATION

B.Sc. in Software Engineering

Fatih Sultan Mehmet Vakıf University

Graduated: June 2026

EXPERIENCE

Software Engineering Intern

Gelişim University | July – August/2025

- Developed multiple independent Android apps using Kotlin, Jetpack Compose, and Clean Architecture in a supervised lab environment.
- Integrated Firebase and Room for robust cloud and local data management across personal projects.
- Authored unit tests and iteratively optimized codebase based on regular code reviews and performance ratings from the supervisor.
